

I feel that it my right as well as others to choose what kind of radio I want to listen to. That is satellite radio. It offers everything that I want to listen to and more. To take the traffic/weather stations away from us is to say the least unfair. Just because the local radio stations have their dander up is no reason to make those of us who choose to listen to uninterrupted radio take some of our stations off satellite. If the local stations gave people what they wanted instead of changing their format so often then maybe they wouldn't have been put into the position that makes uninterrupted traffic and weather stations like XM have been willing to provide.

Signed

A very happy XM listener
